Message Delimiters

Delimiter	Suggested Value	Encoding Character Position	Usage
Segment Terminator	<cr> hex 0D	-	Terminates a segment record.
Field Separator		-	Separates two adjacent data fields within a segment. It also separates the segment ID from the first data field in each segment.
Component Separator	^	1	Separates adjacent components of data fields where allowed.
Subcomponent Separator	&	4	Separates adjacent sub-components of data fields where allowed.
Repetition Separator	~	2	Separates multiple occurrences of field where allowed.
Escape Character	\	3	Escape character for use with any field represented by a ST, TX or FT data type, or for use with the data (fourth) component of the ED data type
