

Results from Risk Assessment visit on: _____

Patient name: _____ ID#: _____

YEARLY SCREENING MAMMOGRAM

Routine screening mammography is recommended every year for all women 40 years and older. Sometimes it is recommended to begin earlier if a person is determined to be at higher-than-average risk for breast cancer.

____ Based on your level of risk and family history, you should begin yearly screening mammograms at age ____.

YEARLY SCREENING MRI

Your risk of developing breast cancer indicates the need for additional screening. MRI and mammograms may be staggered at 6-month intervals, or performed at the same time each year depending on your preference.

____ Based on your level of risk and family history, you should begin yearly screening MRIs at age ____.

ABUS (Automated Breast Ultrasound)

Dense breast tissue is very common, but can make it harder to find cancer on a mammogram. Also, dense breast tissue may increase your risk of breast cancer.

____ Based on your dense breast tissue, we recommend an ABUS with your mammogram each year, until told otherwise by the radiologist (If you have annual MRIs, ABUS is not needed).

CLINICAL BREAST EXAM

A clinical breast exam every ____ months is recommended with a clinician or doctor.

SELF EXAM - Be aware of changes in your breasts. Perform self-examinations at least monthly, and report changes and concerns promptly.

CONSIDER RISK REDUCTION

Risk reduction strategies may include regular exercise, a healthy plant-based diet, low alcohol consumption, and long-term weight management. Other options, which you should speak to your doctor about, include risk reducing surgery and/or medication.

CARE CLINIC REFERRAL

____ Our doctors recommend participating in the CARE (Cancer Assessment and Risk Education) Clinic for long term risk management. We will forward a referral for you. You will be contacted by a CARE Clinic representative for an appointment.

____ **GENETIC TESTING** - Based on your personal and/or family history, you qualify for genetic testing, which is a test that can help determine if you are at increased risk for developing cancer due to a genetic mutation passed down through your family.

____ Specimen collected today ____ Patient considering testing ____ Patient declines testing

Please indicate how you would like to receive a copy of your genetic testing results:

____ Mail to the address on file ____ Send via email to: _____

Note: You will receive an email with instructions on how to set up an account and access your health records through a secure myMANA Health Portal.

RESULT DELIVERY NOTICE:

- **If your test results are positive:** You will receive a phone call from the nurse to discuss your results. If we cannot reach you, you will receive a text message letting you know that your results are ready, and to contact us for an appointment to review your results and recommendations.
- **If your test results are negative, or are of uncertain clinical significance:** You will receive a copy of your report either mailed to you or sent to the email address you provided above, along with a letter containing any additional recommendations.

UPDATED RISK ASSESSMENT: An updated risk assessment is recommended every 5 years or if any change in your family history occurs.

PLEASE READ AND SIGN: "I have read and understand the results and recommendations on this form, and that new family history, genetic testing, and scientific discovery may change these recommendations. I also agree that if my contact information changes, I will notify The Breast Center within 30 days."
