

Results from examination on _____

Transcribed by: _____

Patient name: _____ ID# _____

_____ **NEGATIVE or BENIGN**

There are no suspicious findings or the findings are not related to cancer. Routine screening mammography is recommended every year for all women 40 years and older.

_____ **INCOMPLETE ASSESSMENT**

_____ Comparison with previous examinations is needed.

_____ MRI is recommended. Our MRI coordinator will contact you to schedule your appointment.

_____ A probable cyst has been identified. Our nursing staff will schedule an aspiration.

_____ **LUMPECTOMY PROTOCOL** There are no suspicious findings. Because you have had breast cancer treated with a lumpectomy, a _____ month follow-up diagnostic exam is recommended to confirm that the area shows no change. Your insurance will likely cover the test but it may be applied to your deductible and cause you to have out of pocket expense. Diagnostic studies are needed to watch for change in the identified area and may be recommended for up to 2 years before returning to screening.

_____ **PROBABLY BENIGN** An area has been identified in your _____ breast that has a 98% chance of being benign. A _____ month follow-up diagnostic exam is recommended to confirm that the area shows no change. Your insurance will likely cover the test but it may be applied to your deductible and cause you to have out of pocket expense. Diagnostic studies are needed to watch for change in the identified area and may be recommended for up to 2 years before returning to screening.

_____ **SUSPICIOUS FINDINGS** An abnormal area has been identified in your _____ breast and biopsy is recommended.
_____ If you have not already been scheduled, our nursing staff will contact you to schedule your procedure.
_____ A biopsy has been performed. We will contact you with results soon.

BREAST DENSITY

_____ **The mammogram shows that your breasts are considered not dense.**

_____ **The mammogram shows that your breast tissue is dense.** Dense breast tissue is very common and is not abnormal. But dense breast tissue can make it harder to find cancer on a mammogram. Also, dense breast tissue may increase your risk for developing breast cancer. We are providing this information to you simply to raise your awareness of the limitations of mammography. Use this report when you talk to your doctor and ask your doctor if more screening tests might be useful, based on your risk.

_____ **The radiologist strongly recommends Automated Breast Ultrasound (ABUS) exam.** Additional information is available on our website at www.mana.md

PLEASE SCHEDULE AS YOU LEAVE THE CLINIC:

_____ Screening mammogram (with/without implants)

_____ Unilateral Diagnostic mammogram

_____ Automated Breast Ultrasound

_____ Unilateral Diagnostic mammogram w/US

_____ Hand Held Screening Ultrasound
